EDUCATION

NMAM Institute of Technology

B.Tech in Computer and Communication Engineering

Nitte, Karnataka

Aug 2023 – May 2027

EXPERIENCE

Freelance Full-Stack Developer

Fiza Group

Jul 2026 – Present

- Built and maintain **StockOS**, an **8-module** inventory & repair-ticket system for a multi-retailer aggregator client

Freelance Full-Stack Developer

Sri Vani School Education Center

Jun 2026 – Present

- Building **SynapSet**, an LLM-driven exam-generation platform, for Sri Vani School Education Center

Centralized Server Deployment & Maintenance

Sri Vani School Education Center

Feb 2026 – May 2026

- Deployed & maintained a Linux server (Apache, Samba, PHP) for **40+ users**, **20+ devices**, handling **10+ revisions**

PROJECTS

SynapSet | *FastAPI, Google Gemini API, XGBoost, OR-Tools, Pytest*

- Built an LLM agent pipeline ingesting syllabi across **3 formats** (PDF/DOCX/PPTX) via entity extraction and PageRank; an OR-Tools CP-SAT optimizer assembles papers to per-topic counts across all **6 Bloom's levels** with an XGBoost/SHAP difficulty scorer
- Built a duplicate-detection engine fusing **3 signal types** (semantic, graph, structural) against prior papers and the question bank
- Covered the pipeline with a **Pytest** suite (isolated fixtures, mocked storage/DB) for independently testable generation, scoring, and export logic

StockOS | *React, Vite, Tailwind, Express, Prisma, SQLite*

- Built and maintain an **8-module** inventory & repair-ticket system for a multi-retailer aggregator client, in active development ahead of deployment
- Live dashboard with real-time KPIs, low-stock alerts, and a **3-stage repair-ticket pipeline** with audit-trail enforcement
- Backend built with Prisma ORM over SQLite, with a transaction ledger, invoicing, and JSON backup/export

MiniADC | *C++, Asio, CMake, Multithreading*

- Built a Layer 7 reverse proxy/load balancer in C++ with async I/O (Asio), supporting round-robin, least-connections, and weighted strategies across backend servers
- Implemented active health checks auto-removing/restoring backends by liveness, and a signature-based WAF blocking SQLi/XSS/path-traversal with per-IP rate limiting
- Exposed a Prometheus-style /metrics endpoint; validated with a **30-case** doctest suite, strict config validation, and static-linked builds

voiceNova | *React Native (Expo), Python, Groq/LLaMA API, Docker*

- Built a voice-first planner after traditional task apps didn't suit how I think, letting me dump unstructured thoughts and using the **70B-parameter** Groq LLaMA-3.3 model to auto-organize them into tasks and events
- Integrated local Whisper-based speech recognition for one-tap, hands-free capture
- Containerized as **2 services** (Python backend, Expo frontend) via Docker Compose with offline-first fallback

LEADERSHIP & ACTIVITIES

Event Co-Head & Social Media Manager

2024 – 2026

ACM Student Chapter, NMAM Institute of Technology

- Co-led planning and execution of **3+ technical workshops** and coding events reaching **100+ student attendees**
- Grew social media presence to **8,500+ accounts reached** with a **158.8% increase in engagement** through targeted campaigns

TECHNICAL SKILLS

Languages: Python, C++, TypeScript/JavaScript, PHP, SQL

Backend / AI / Systems: Node.js/Express, FastAPI, Flask, Prisma ORM, LLM Agents, RAG Pipelines, Google Gemini API, Groq/LLaMA, XGBoost, ChromaDB, Asio, Multithreading

Frontend: React, React Native (Expo), Tailwind CSS, Vite

Data / Infra / Tools: SQLite, PostgreSQL, Docker, Linux, Apache, Git, Postman, OR-Tools, CMake, Pytest/doctest

CERTIFICATIONS

Microsoft Learn – Azure AI Agent Development and Generative AI

Postman API Fundamentals – Student Expert
